

# PYTHON: NUMBERS CHEAT SHEET

There are 3 types of numbers in Python:  
Integer, Float and Complex

## ASSIGN

```
Assign a variable to a  
number a = 1.2, b = 3,  
c=2j
```

## ADD

## MULTIPLY

```
a * b , 5 * 1.2 , 10 +  
c
```

## CAST

```
a = float(1)
```

## COMPARE

## RANDOM()

```
import random  
a = random.randrange  
(1,10)
```
